

Business Case Study

Project Duration: July 2026

Business Problem

A retail company wants to understand its sales performance across different regions, customer segments, and product categories in order to improve profitability and support strategic decision-making.

Objective

Build an interactive Power BI dashboard that helps management quickly monitor business performance and identify growth opportunities.

Dataset

- 9,994 retail transactions
- Sales
- Profit
- Quantity
- Region
- Category
- Customer Segment

KPIs

- Total Sales

- Total Profit
- Total Orders
- Total Quantity Sold

Key Insights

- West region generated the highest sales.
- Technology was the most profitable category.
- Consumer customers contributed the highest sales.
- South region had the lowest sales.

Business Recommendations

- Increase marketing investment and inventory allocation for the Technology category, as it delivers the highest profitability.
- Design region-specific promotional campaigns and evaluate pricing, distribution, and customer acquisition strategies in South and Central to improve sales performance.
- Strengthen customer retention through loyalty programs for Consumer customers while designing dedicated offers for Corporate and Home Office segments to diversify revenue.

Tools Used

- Power BI
- Power Query
- DAX
- Excel

Skills Demonstrated

- Data Cleaning using Power Query
- Data Visualization
- Dashboard Design
- KPI Development
- Business Analysis
- DAX Measures
- Decision Support
- Executive Reporting
